

CommuniGate Pro

# Micro Dynamic Cluster

Internet Communications is business critical to the SMB market because business depends upon reliability of communications. Those businesses that have full Internet Communications gain a competitive advantage - CommuniGate Systems now offers the unique award winning and world record holding CommuniGate Pro Micro Dynamic Cluster starting with 100 users. SMB corporations receive five 9's (99.999%) uptime infrastructure with two active-active backend servers which can be expanded at any time by just adding nodes. The "Rolling Updates" feature allows software or hardware upgrades or changes without taking the entire cluster off-line.

## Advantages

- Get the active-active Micro Cluster technology which is used by the largest ISPs for true uptime
- One solution for all corporate Internet Communications with messaging, collaboration, IM, VoIP, and SIP based PBX
- Reduce TCO for all Internet Communications
- Easy migration from existing solution with simple installation
- Use standard or existing hardware with choice of Windows, Linux, Unix, OSX, etc.
- Use existing NAS/NFS or SAN storage
- Easy to administrate with delegation
- EdgeGate Services for session border control and security
- Expand and add nodes when needed without any down time
- True 99.999% uptime and not only a failure backup
- Consolidated identity management and active-active redundancy with no database required
- Full-development platform for extensibility or building applications

## 99.999% Uptime for all INTERNET COMMUNICATIONS

(Unique Offering for SMB Market)
